RISK AND SUSTAINABILITY: Achieving Responsible Growth

There was a time when environmental, social and governance (ESG) issues were the niche concern of a select group of ethical or socially responsible people. Well, that time is long gone. What's more, the Sustainable Development Goals (The SDGs) set out by the United Nations also show a universal call to end poverty, protect the planet and also promote peace for all living beings. Supporting this ESG and SDG concept, risk management has critical role to achieve what so-called as "responsible growth". This webinar will discuss about to what extent risk management can contribute in promoting sustainability, supporting circular economy, and interpreting ESG metrics to build more sustainable future both for the organization and our planet
